

Caterpillars had a great time exploring indoor and outdoor environment with confidence.

Collage

Collage was fun. The children used their fine motor and coordination skills to apply glue on the paper then pasted small cut coloured paper to create Aboriginal flag.

Learning skills: concentration, fine motor, language skills, creativity, and coordination.

Construction (soft linking)

It was great to see children learning to build and connect the blocks together. *Or* connected soft linking to create a person and name it her Daddy.

Ka, Or and Al shared, counted, and classified the small dinosaurs into bowls according to their colours.

Ka also spent time kicking balls to *Ms T* on the grass. *Ms T* held *Al, Ma, and Or* hands when they walked on the walking stones, then climbed to the balance beam, finally jumped into the grass which all of them enjoyed so much.

Learning skills: developing great balancing skills, gross motor, patience, coordination, classification counting, and colours.

Group experience

Educators and all the caterpillars were using music to connect to each other which new children enjoyed being a part of. They especially liked playing the instruments.

We also played simple game with the children to make them feel part of the group and to establish and maintain respectful, trusting relationships with them like 'who is under the rug', which all the children enjoyed.
