

Preparation for Father's Day

By making carrot cake for their fathers along with *Ms S*, they learnt how to measure the ingredients, learnt concepts of volume and shape, developed scientific skills as they observed the change in texture, prosocial skills like waiting for their turn. *Ms S* explained that were using a measuring container that can fill up to two cups full, so when the recipe says 1 cup, we must look for the mark that says 1 cup. The children noticed with educator's support that the 1 cup was marked at the half of our measuring container. This way, the children developed literacy and numeracy skills as we measured our ingredients as per the written recipe.

Children's Performance

The children confidently presented the concert for their fathers, making them feel proud. The children had been practising every day for the performance by singing and dancing to the music, following educator's instructions and actions. This also further encouraged their language skills (singing in different languages), ability to follow the beat and the rhythm of the songs and their self-esteem.

Participating in Races and physical activities

The children had fun participating in races, hurdle races, playing limbo, musical chairs, and music and freeze games along with their family members and peers. The Parents also participated in racing games and spoon and strawberry race. The children cheered the participants and were very proud to see their parents participating. All the participants displayed sense of achievement and received a stamp for participation. The children understood the rules of the game and waited for their turns patiently and showing the understanding and respect for the rights of others.

The whole event was a success as it brought the whole community together, sense of pride and belonging as the children presented their cards and presents to their daddies and enjoyed eating nutritious food together.
